New line of ELR temperature controllers

ELEKTRA ELR 20 is a programmable electronic controller for flush installation, with an independent setting for time and temperature for six events daily. It is equipped with a large (2.9") easy to read LCD display, as well as comfortable, clearly marked keys, facilitating programming and supervision of the controller's operation.

The device has been especially designed for the purposes of the control of heating systems, in particular underfloor heating, within a significantly wide

temperature range. ELEKTRA ELR 20 controller is configurable in three variants of temperature measurement, via an air sensor, floor sensor as well as air sensor with a limiting floor sensor.

Technical data:

- Power supply: 230 V ~ 50/60 Hz
- Max. load: 16A, 230 V 50/60 Hz
- Low energy consumption in the standby mode: <1W
- Installation: flush mounting
- Conduit cables connected to one clamp: max. 2 conduit cables 1.5 mm² or 1 conduit cable 2 mm²
- Clock functions: 6 programmable events for each day
- Comfort temperature range: +5°C ÷ +90°C for each event
- Economical temperature range: +5°C ÷ +90°C for each event
- Limitation floor sensor: +16 ÷ +60°C
- Frost protection temperature control range: +5°C ÷ +10°C

- Manual work mode:
 - temperature range: +5°C ÷ +90°C
 - work time: until cancelled
- Difference/Hysteresis: adjustable 0.5°C ÷ 10°C
- Protection: IP 20
- Dimensions (H x W x D): 90 x 86 x 45 mm
- Display: 46 x 55 mm (LCD)
- Product mark: CE

New Generation ADAX WiFi Heaters

**ADAX NEO WiFi and CLEA WiFi
heaters have been enriched
with wireless thermostats**

Comfort and convenience of operation from the level of smartphones or other mobile devices supporting iOS, Android or Windows Mobile operating systems are crucial features for all users. Now it's possible to modify temperature in any given room at any given time, no matter where you are.

Smartphone or tablet operation, with direct connection to heaters or via internet home network. Possibility of regulation via dedicated apps, from any given location, online temperature readings displayed on the smartphone or tablet's screens, and – what's most important – energy savings of up to 25% are just a few of the advantages of this smart heating system.

New Legal Regulations

Starting from January 1st 2018, the intensified requirements of the European Commission Directive will come into force, concerning Ecodesign for energy related products, including local space heaters, storage heaters, etc. ERP Directive with regulations is a continuation of the 20/20/20 Renewable Energy Directive legislation package.

In the light of the legislation, until 2020 the share of renewable energy will have increased by 20%, simultaneously with the 20% reduction in CO₂ emissions and the 20% reduction in primary energy consumption.

New legislation does not concern heating elements, such as heating cables or mats, intended for connection to control systems. Manufacturers of controllers and controller equipped devices have been obliged to introduce modifications allowing to adjust those devices to the requirements of new regulations.

The Directive charts separate Ecodesign requirements concerning energy efficiency for convection radiators, and separate for underfloor heating systems. Due to these requirements, by the end of the year ELEKTRA company will have introduced into the range such devices

which fulfil the stricter restrictions. All earlier manufactured devices will be offered until the stocks last. New legislation is valid for orders on all products manufactured after the regulations come into force.

Currently featured in the offer temperature controllers of the OCD4 and OCD5 range have already been equipped with the functions complying with the requirements of the 2009/125/EC Ecodesign Directive, as well as Commission Regulation (EU) 2015/1188.

THE SUMMER
SPECIAL OFFER
IS BACK!

Warm Floor ALWAYS!

Free beach'n picnic blanket :)

with each purchase of any underfloor heating product together with the ELEKTRA OCD5 controller.

High quality, aluminium lined beach'n picnic blanket. Very large size 180 x 210 cm, ideal for a picnic with family or friends, also as a beach mat. High durability and moisture resistance due to aluminum bottom lining. Top layer made of comfortable and pleasant to touch fleece. Just what you need most on picnics, trips and holidays!
